Static Drain Choke: SDC-2F

The static drain choke presents a high impedance to RF energy in the 500-17000 kHz range, and they are used to provide a DC path to ground for static charge buildup on AM broadcast towers. Custom windings are available on request.

SDC-2F

Static Drain Choke wound on fiberglass form, with mounting kit that includes (2) 3" insulators.

Frequency Range: 500-1650 kHz

Standard Dimension: 11-1/2" L x 3-7/16" I.D. x 4" O.D.

SDC-1FS-LCR

Large Static Drain Choke wound on fiberglass form, with a 8" diameter corona ring and mounting kit, which includes 6" insulators and end caps.

Frequency Range: 500-1700 kHz

Standard Dimension: 34" L x 4" Dia.
