

November 9, 2010

At the 2010 Canadian Western Association of Broadcast Engineering Convention held last month in Vancouver, BC, the Excellence in Engineering Award was presented jointly to Dave Youell, Chief Engineer for CTV Limited radio stations CKST and CFUN; Richard Sondermeyer, GS Broadcast Services, for his involvement as the project manager for the construction of the new CKST and CFUN site; Robert Kowalchuk, PE, D.E.M. Allen Broadcast Consultants, the commissioning engineer for both stations; and Rob Elder, Kintronic Labs Project Engineer, and Tom King, President of Kintronic Labs, who supplied the Ibiqity HD IBOC-compatible directional antenna feeder system for both stations.

This same team made a one hour presentation in one of the technical sessions at the WABE Convention on the planning, design and project implementation of this co-sited dual AM directional antenna system array, which is very likely the most complex AM broadcast facility in Canada.
